How to Connect To
AirSuccess
Using Windows 7
Wireless Utility

Prepared by
Virginia State University
Technology Services
**Step 1:** On the bottom right tray, click on the monitor with the wireless signal to the right.

**Step 2:** Click on **Open Network and Sharing Center**.

**Step 4:** Click Next on **Manage wireless networks**
Step 5: Click on Add.

Step 6: Click on Manually create a network profile.

Step 7: For the Network name, enter AirSuccess.

Step 8: For the Security type, select WPA2-Enterprise from the dropdown box.

Step 9: For the Encryption type select AES.

Step 10: Click the Next button.
Step 11: Click on Change connection settings.

Step 12: Select the Security tab.
**Step 13:** From the **Choose a network authentication method** dropdown, select Microsoft: Protected EAP (PEAP).

**Step 14:** Click on the box for **Remember my credentials for this connection each time I’m logged on.**

**Step 15:** Click on the **Settings** button for **Choose a network authentication method.**
**Step 16:** Uncheck the **Validate server certificate** checkbox.

**Step 17:** Ensure that the **Enable Fast Reconnect** is checked.
